5. Risks

- ■ ****Infrastructure constraints**** : Shortages of data centers, energy, capital, or other necessary resources could delay customer and partner deployments or reduce the scale of accelerated computing and AI adoption, affecting future revenue and financial performance.
- ■ ****Product transition execution**** : Complex product transitions and sophisticated system configurations have caused and may continue to cause production delays and supply-demand management challenges.
- ■ ****Regulatory and legal compliance**** : Existing or future regulations covering IP, taxes, import and export requirements, tariffs, anti-corruption, acquisitions, foreign exchange controls, data privacy, antitrust, advertising, employment, product rules, cybersecurity, environmental requirements, responsible AI, climate change, cryptocurrency, and consumer laws could increase costs, hurt competitive position, and materially affect results.
- ■ ****Human capital**** : The company depends on recruiting, developing, and retaining top global talent to execute its business strategy successfully.
- ■ ****Sector**** : Tech/semiconductor cyclicality risk
- ■ ****Size**** : Mega-cap → growth harder to sustain
